

----- Decision based on clinical judgement

\$ = Cavitory hemorrhage (hemothorax or intra-abdominal hemorrhage)

* = Exclude cavitory hemorrhage

% = Concomitant cavitory and retroperitoneal hemorrhage (retroperitoneal hematoma expansion intra-operatively)

= The pre-peritoneal packing could be considered when the angioembolization is unavailable or the patient requires life-saving surgery

CXR=Chest X-ray, PXR=Pelvic X-ray, SBP=Systolic blood pressure, CT scan=Computed tomographic scan, CE=Contrast extravasation
